

LIP BLUSHING - PRE PROCEDURE PREPARATION INSTRUCTIONS

APPROPRIATELY PREPARING FOR THE PROCEDURE CAN LESSEN SENSITIVITY AND REDUCE ANY IRRITATION.

it's simple to do — here's how:

FOR TWO WEEKS PRIOR TO YOUR APPOINTMENT, DO NOT:

- take Vitamin A or use Retinol products have Botox or fillers

FOR 24 HOURS TO 48 HOURS BEFORE THE PROCEDURE, DO NOT:

- consume coffee or other caffeine products take aspirin or ibuprofen for pain relief
- On the day of the appointment, do not:
 - apply makeup to your lips or surrounding areas
 - Also, avoid exfoliating skincare products and any medications that thin out the skin.

It is vital to take anti-viral medication before the procedure if YOU are prone to cold sores. Cold sores can appear a few days after the procedure due to the trauma of tattooing. Lip Blushing will not give you coldcore virus if you do not ALREADY have a past history.

HOW LONG DOES THE LIP TATTOO HEALING PROCESS LAST?

- The healing period lasts around 7-10 days. Your lips will be swollen for 24-48 hours and some scabbing will appear after that.
- Also, the color will look too intense, but 50% of it will fade during the first week, however it takes 6 weeks for the color to fully settle.

LIP BLUSHING - POST-PROCEDURE PREPARATION INSTRUCTIONS

Aftercare is very important for a good result Read carefully.

LIP TATTOO HEALING PROCESS

- Keep the area MOISTURIZED. Use Aftercare as an after care anti-oxidant. Gently apply every hour or two or when you feel tender, itchy or dry for 10-14 days.
- This provides pain relief, moisturizes, prevents infection, promotes healing and helps retain colour. (If you do not have Bacitracin Zinc, or Polysporin use Vaseline or Vitamin A & D ointment instead).
- Avoid soaps/facial cleansers on pigmented areas (wash around them) pat dry with a clean towel.
- Before showering, use Aftercare first and apply Vaseline on top. Do not directly shower the treated area.
 - DO NOT rub, scratch or pick any crust along the tattooed area. Early removal of pigment crusts may result in lost colour.
- DO NOT apply makeup on the pigmented area during the healing process.
- Avoid swimming, soaking, steam bath and facials for the 1 st week.
- Avoid applying Exfoliates or AHA/glycolic acid products to the tattooed area for at least 2 weeks.
- Avoid sun exposure (including tanning beds) during healing process.
- If you have a history of cold sores/fever blisters/herpes on or around your lips, you MUST obtain prescription ZOVIROX/VALTREX from your doctor. Start prescription 3 days before and 5 days after procedure (or follow the doctor's instruction). Failure to take this anti-viral medication may result in an outbreak which will cause color lost and patchy

AVOID THE FOLLOWING FOR 7 DAYS:

- Extreme exercise, swimming in pools or the ocean, saunas and steam baths - anything that causes excessive sweating and getting the treated area soaking wet, Tanning in the sun or a sunbed Makeup in the area, Touching the area, Spicy food

LONG TERM CARE

- Use a good sunscreen daily with SPF 30 up to SPF 50 on tattooed area otherwise the colour will fade faster.
- Our pigment is iron-oxide based which your body absorbs as mineral iron, so the colour will fade over time. You may need a touch-up every 1-3 years. The fading speed depends on your skin type and your specific lips.
